

Get to know our animals!

HELLO!

This study is researching how infants react to surprises!

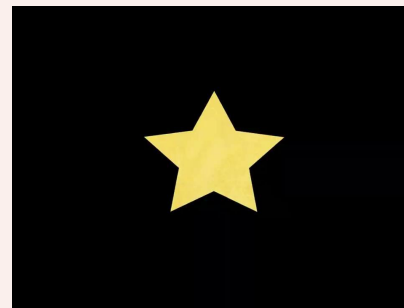

In this video we will outline the process your child will undergo while assisting us

Overview of Our Study:

- 4 trials
- Around 10 minutes

Note: You can always pause using , or stop the experiment by pressing 

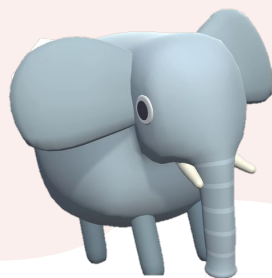

Example of an attention getter

One Trial

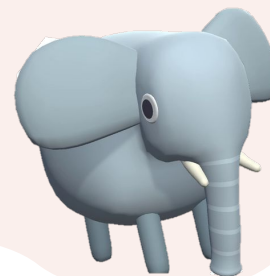

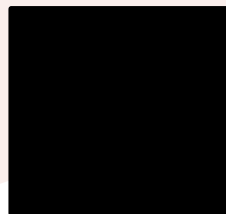

- Attention getter
- A sequence of animated objects being unveiled by a curtain

Animated Sequence

5 Seconds

or

Surprise!

Guidelines for the Experiment

- Try your best to find a distraction-free room that is well lit
- Try to use sunglasses during the experiment if possible
 - That will help our computer more easily detect your child's eyes instead of yours!

An example of a good testing environment

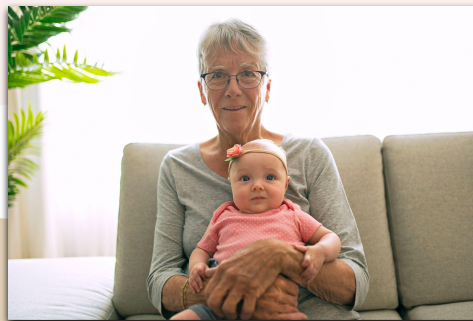

Guidelines for the Experiment

- We love when babies sit in high chairs!

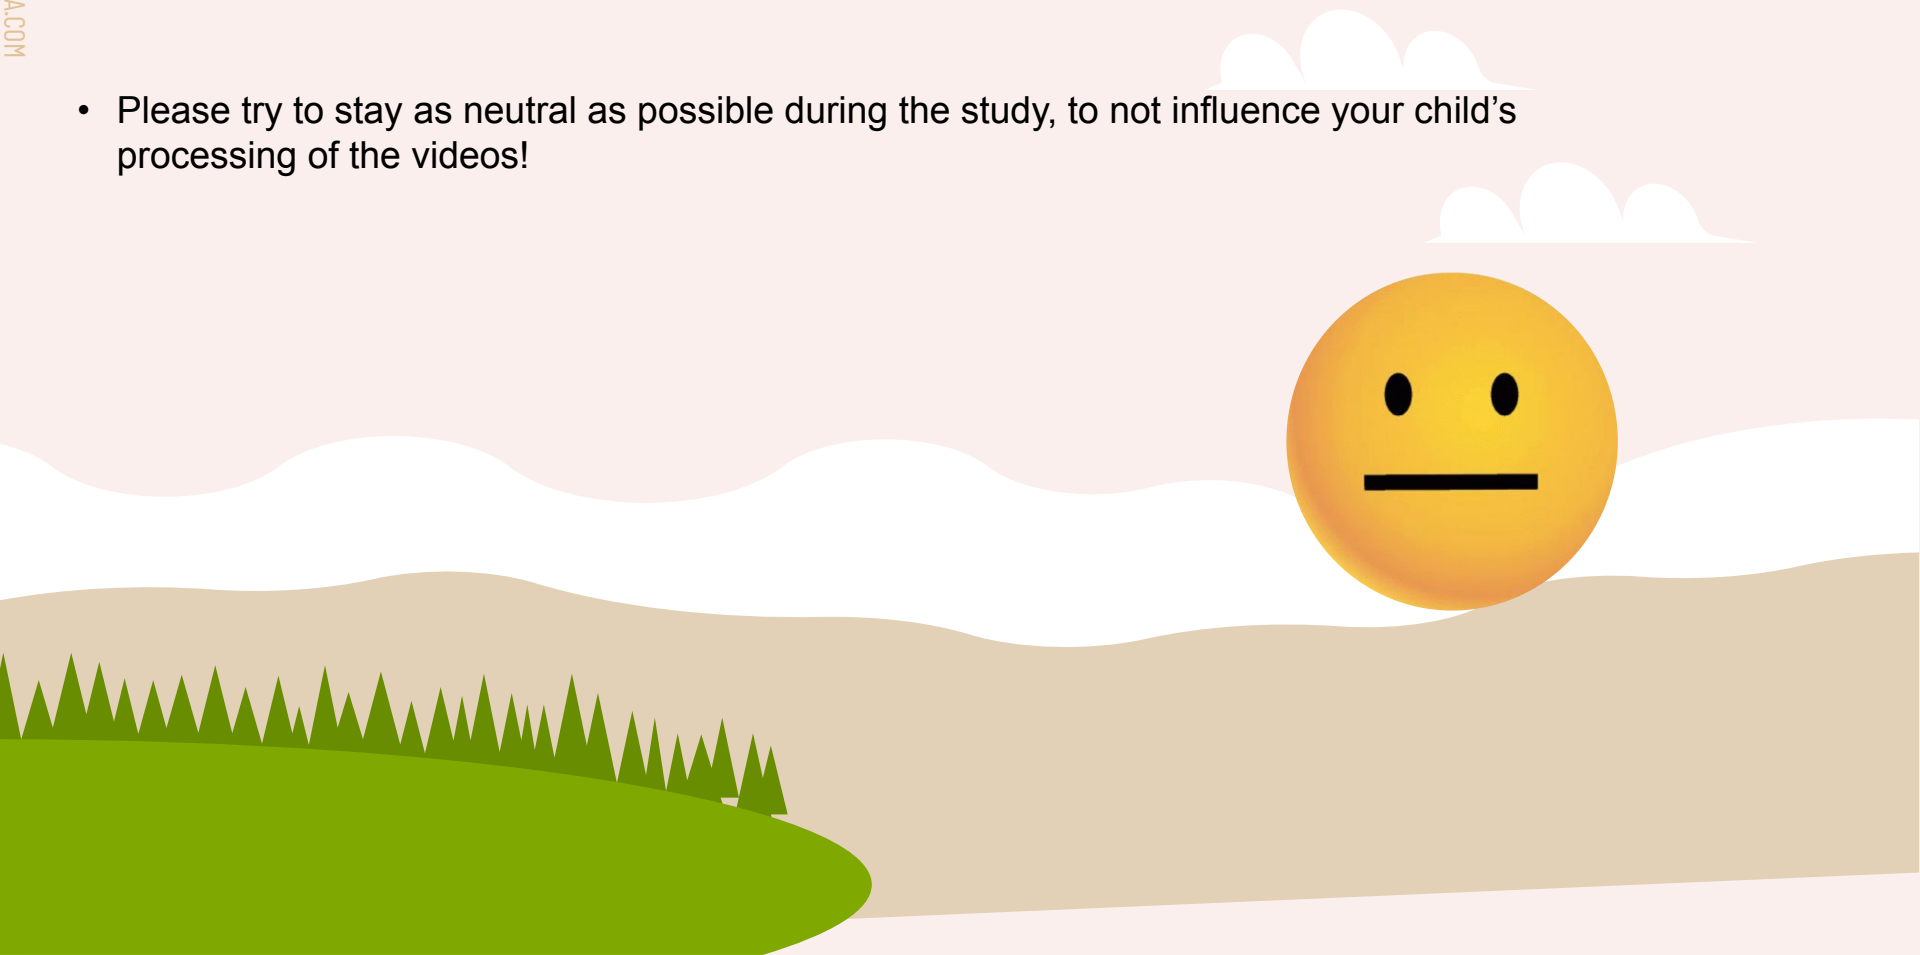

- On your lap is also ok!

Guidelines for the Experiment

- Please try to stay as neutral as possible during the study, to not influence your child's processing of the videos!

Guidelines for the Experiment

- In this study, we also ask you to help us determine when your child has finished looking at each trial, so they don't get too bored.
- In the next step, we'll show you how to do that, and you'll get to practice a bit before the actual study.
- Don't worry, it's really easy!

Thank you so much for participating! Enjoy!
